Summary

Computer engineering diploma student who builds full-stack and terminal-based tools end to end, from backend architecture to deployment. Publishes open-source packages to PyPI and is interested in backend systems, real-time infrastructure, and applied AI.

Education

Shri Bhagubhai Mafatlal Polytechnic Engineering College

Mumbai, India

Diploma in Computer Engineering

2024 – 2027

- Semester 4 Result: 90.56%

Technical Skills

- **Languages:** C/C++, Java, Python, JavaScript, HTML/CSS
- **Frameworks & Tools:** React, Node.js, Git & GitHub, Docker
- **Databases:** MySQL, PostgreSQL
- **Systems:** Linux, CI/CD Pipelines, Cloud, DevOps, Networking & System Administration
- **AI & Other:** Agentic AI, Generative AI, Prompt Engineering, Backend Development, UI/UX, Flutter/Go

Projects

trmsg – Terminal-Based Messaging Platform

github.com/CodebyJanak/trmsg

- Designed a terminal-native chat client in Python using Click for the CLI layer and WebSockets for persistent, low-latency connections between users.
- Packaged and published successive releases of the tool to PyPI as features were added and issues were fixed.
- Wrote about the build process and shared usage guidance with other developers through posts on LinkedIn.
- **Tech Stack:** Python, Click, WebSockets

Mesh – Live Streaming Platform

github.com/CodebyJanak/Mesh

- Built a live streaming platform across five development phases, integrating LiveKit for video delivery and Socket.IO for real-time chat alongside each stream.
- Designed the backend on Node.js with Supabase for auth and storage, later replacing Prisma with raw PostgreSQL queries to fix compatibility issues and cut dependency overhead.
- Implemented the React frontend to handle stream state, viewer counts, and chat synchronization across concurrent sessions.
- **Tech Stack:** React, Node.js, Supabase, PostgreSQL, LiveKit, Socket.IO

Panic Button – Live News Intelligence Platform

github.com/CodebyJanak/PanicButton

- Built a live news aggregation platform that pulls from multiple sources and surfaces potential bias in coverage.
- Designed a canvas-based NewsRadar visualization to represent story clusters and source distribution in real time.
- Integrated Gemini AI for content analysis and redesigned the interface with a glassmorphism aesthetic in a v5 release.
- Deployed and maintained the application on Render.
- **Tech Stack:** JavaScript, Gemini AI, Canvas API, Render
